The app that I designed is a dating app called Windfall. My intention with this new dating app is for people to find their ideal partner, but a key difference is that the user is required to submit their income through a verification to determine whether or not they do actually make that income. Users in other dating apps can add their current job into their profiles or any job they can think of. This can mislead other users when they are looking for someone that can provide a certain lifestyle or if they want someone who earns the same income. With Windfall, users have the standard profile as with many other dating apps, but as mentioned before, when creating a profile users will be required to submit a proof of income.

Other platforms that I found inspiring to help me with designing my project were Tinder and Bumble. I like their easy user interface and the swiping mechanism that many dating apps have adopted. I also took inspiration from Tinder's website to design mine. When a profile appears on the page that you swipe on, the user will see the other person's pictures, name, age, and their income. There will also be a button that can be pressed to see what else the profile has to offer. Looking at the now expanded profile, you will be able to see what they do for work, their sexuality, and pronouns. There will also be different prompts that a user can fill out, ranging from their job/experience to fun prompts, allowing users to get to know one another.

The main color scheme of the platform is green and white. I chose emerald green because it is associated with money and wealth. Green is also seen as a lucky color, so users might feel lucky when they match with someone who is ideal for them. White is also part of the color scheme because it is refined and modern. White is also associated with honesty which pairs well with the platform due to people being transparent with their income. Another more subtle color would be pink. I chose pink because it is associated with love and compassion, which is what a dating app is about.

I decided to create a logo that went with the theme of the dating app. I went through a few ideas and landed on a heart-shaped leaf that is being blown in the wind. I wanted to incorporate the name of the app and the idea of the app into the logo somehow, by using the color scheme and imagery. Windfall is a synonym to income, and it means, "something that

provides happiness or does good for a person or thing." (Merriam-Webster) Thus the green color. I also incorporated a heart-shaped leaf as leaves fall as they are being blown in the wind, and because hearts signify love. The logo is also reminiscent of the Tinder logo, which I took inspiration from, this further shows possible users that Windfall is a dating app. The header image that I chose was one that I created for the site. It is the heart-shaped leaves getting blown by the wind.

The text descriptors show the different features that Windfall will bring to the market. They further show what the app is about. It highlights features like the required income as well as the preferences tab, which will allow you to choose the income range you desire to swipe on.

The first sketch is when you first open the app, it will immediately take you to the main page where you swipe either left or right on users. There is a carousel of images that the user provides as well as information on their name, income, and distance from you. There is also a broken heart when you swipe left and a full heart when swipe right. There is also an expand symbol to expand the profile. The second sketch is the expanded profile, there you will see more information, from hobbies, their job, and prompts. This will allow you to get to know someone past their appearance and income. The final sketch shows the messages page and how it will look when you have matches that you have not spoken to and others that you have already started conversations with.

This social media platform is significant because it forces the users to be transparent about what their income is. On other dating apps you can lie about your occupation and say that you are a software engineer, but in reality, you work at McDonalds. There are people who want someone who makes above a certain income and this app will really help people find who they are looking for. Knowing that there are certain groups of people who are only looking to date someone that can provide them with a certain lifestyle, this app may fall victim to those people. But I also know that there are people who want to have a partner that have the same or similar incomes/lifestyles, who can benefit from having a dating app like this.
